WITH GRACE CLARKE

AI CREATIVE STRATEGY BLUEPRINT - WEEK 3

WHO I AM

Madewell (in-house) → Derris (venture) → CMO (brands) → Shopify (SaaS).

I made my first chatbot on Thanksgiving in 2022.

This summer, I taught 2,500+ people, and 30+ companies.

WHAT WE'RE GIVING YOU TODAY

YOU DIDN'T JUST ASK FOR
MORE AND BETTER ADS.

YOU ASKED FOR A SYSTEM
THAT THINKS.

WHAT WE'RE GIVING YOU TODAY

2 in 3 of you aren't just creative strategists - you're founders and marketers who touch everything.

Making killer ads is the final 60%.
Today is the prep - the first 40%.

WHAT WE'RE GIVING YOU TODAY

"Ideation is by far the longest part of my process. The writing is easy after."

"I want actual agentic workflows. Not just more .md files sitting in a folder."

"I need a true start-to-finish process that produces client deliverables of all kinds"

BUT FIRST,

1. ***Brand battle: Astra GPT-6 v Fable 5.1*** ←
2. The Strategy Engine
3. The Daily Crystal Ball
4. Habits of the best operators

BRAND BATTLE: FABLE 5.1 (TUES) VS CHATGPT-6 ASTRA (FRI)

Build me a complete concept shop for a fictional houseplant tonic: a concentrated plant feed sold in a single dropper bottle, one product only.

Include:

- Bottle visuals that change with the brand direction
- Three switchable brand directions (different palette, typography, and feel), selectable from the top of the page
- A landing/hero section and a short brand story
- A product page: price, size, one-time vs subscription option, quantity, add to bag, and a few expandable product questions
- A convincing mobile shopping experience with a bag and a demo checkout flow (no real payments)
- Real, specific copy throughout. No placeholder text.

Build it in one pass and publish it. Don't ask me questions first; make the calls yourself.

Type / for commands

Bypass permissions +   Fable 5.1 High 

Build me a complete concept shop for a fictional houseplant tonic: a concentrated plant feed sold in a single dropper bottle, one product only.

Include:

6:36 AM 

We'll be back in 30ish minutes... though this'll take about 7

1. Brand battle: Astra GPT-6 v Fable 5.1
- 2. The Strategy Engine ←**
3. The Daily Crystal Ball
4. Habits of the best operators

“FASTER, BETTER OUTPUT” MAKES “WHAT SHOULD WE MAKE?” MORE IMPORTANT

#1 ask: “10x volume of quality creative, copy, LPs, ads”

#2 ask: “Actual agentic workflows. Not just more .md files sitting in a folder.”

“A system that spits out well-researched creative ideas, personas, etc in my market”

"Build a creative factory that lets me produce really good images, and use AI for things I never would have thought of before."

TLDR: You need a process that regularly tells you the most useful thing to make next. And this needs to feed into the next stage: production.

I'll show you how I solved this.

10 TABS INTO 1: A DAILY RESEARCH+ROI BRIEF

What I was doing

Scroll forever and ever. Send myself 10000 links. Choose one interesting thing to focus on when I feel stressed.

Research chosen thing for two hours. Panic-draft.

Publish in one place. Maybe monitor performance?

Why this failed

Inconsistent.

Very anxious - creation from a place of panic feels horrible and performs weakly.

Ironically, the more time I spent trying to do this, the less result I got. And I felt anxiety and shame.

What I did instead

Everyday, I get ideas ranked by anticipated performance *come to me*. I'm guided through the process of articulating my only-Grace-could-say-this take, I have two rounds of editors, and the metrics I care about have 2x'd over 3 months.

WHAT DOES THIS GIVE YOU?

Operator — read 11 call transcripts, Gmail, Slack, Asana + your feed · last 7 days

Found 13 hot topics, ranked. 🗄️ = client line, shown verbatim but genericized before anything's staged.

From your desk

#	🔥	Hot topic
1	8.9	🗄️ Client Tue call: "we don't need AI, we need our team to stop being scared of it." The blocker is permission, not tooling.
2	8.5	🗄️ A client asked "can it just watch my inbox and tell me what's slipping?" — the paranoia-pass you keep almost building.
3	8.4	👤 Thursday's student, mid-class: "I didn't know I was allowed to just ask it to do the boring part."
4	7.6	🗄️ The team finally shared their files with the bot and the whole thing lit up — the one human step that was the entire bottleneck.
5	7.2	📧 Your email triage drafts 19 replies before 8am. Every room you show it to goes quiet.
6	6.8	🗄️ A client wanted the "which tool should we buy" answer. You won't give it — that refusal is the positioning.

From the feed (🕒 = time-sensitive)

#	🔥	Hot topic
7	8.7	🕒 Anthropic shipped a new Claude capability this morning. Everyone's reacting; nobody's translating what it means for non-engineers.
8	8.3	👤 Rachel Karten (Link in Bio): the brands winning on social right now use AI to do more research, not more posting. Your whole class lives this.
9	7.9	👤 Jamey Gannon broke down replacing his team's weekly marketing report with an agent — and what the freed-up hours actually went toward.
10	7.5	🕒 "GEO" is the new SEO — brands optimizing to be cited inside AI answers, not ranked on Google. Marketers are scrambling.
11	7.4	👤 Shaan Puri's "AI employees" post is getting quote-tweeted hard. Ripe for a grounded, non-hype counter from someone who actually trains teams.
12	7.1	🔧 Marketing teams are quietly building their own internal GPTs instead of buying another SaaS seat. The build-vs-buy line just moved.
13	7.3	🗣️ Recurring feed take: "just learn to prompt better." You think the real bottleneck is permission, not prompting.

⭐ **Top picks:** strongest original is #1 (permission over tooling — your whole thesis, straight from a client's mouth). Strongest time-sensitive is #7. For Parker's class, #8 (Rachel Karten) and #10 (GEO) are the ones they'll feel in their own week.

🗄️ **Confidentiality:** #1, #2, #4 and #6 came from client calls — shown with the verbatim moment because they're your best material, but names and numbers get genericized in any draft, and nothing's staged with a client detail until you clear it.

Pinned

Grace Clarke @graceclarke · Apr 19

When I say I teach AI for Normal People, this is what I mean.

<https://nmkte-sherbet-5c4550.netlify.app/>

TOUR: A GITHUB REPO

This person's GitHub handle

The "repo" name, the name of the project. Repos are the equivalent of Google Drive folders.

Branches: Separate copies of the project the creator made. Main is the official — what you'd actually DL and use. Devs create other branches for themselves to test new features. You cannot use these.

Folder: .claude-plugins: The dot (.) at the start means it's a configuration folder with installation instructions Claude reads. It's how this is a "one click install" for users. Without it, you'd have to do everything manually.

Folder: commands: This holds the actual string of mechanical directions Claude uses when you want this to run. If the command (aka shortcut) you type to initiate this is "sherbet", when you type that, it runs the instructions stored here. Ex: When Grace asks you to write in her voice, pull up the voice guide skit.

Folder: skills/council: This is what you probably consider "the skill." It's the instructions that tell Claude how to think like each council member (Strategic, Innovative, Pragmatic, etc.). This is the part you'll customize — he actual document — don't say "straightforward", use short sentences, she writes in lowercase on Instagram, etc.

README: GitHub's equivalent of an instruction manual for GitHub. Every repo has one, a plain english explanation of what the project is, how to install it, how to use it.

Comments (0): A saved checkpoint — like version history in Google Docs. 0 comments means this project has been updated 0 times, and you can click it to see the history.

Stars (163): GitHub's version of a "like."

Forks (0): Fork = copy to your account so they can modify it. 0 forks mean 0 people took this code and made their own version.

Releases: An official versioned release published by the developer (creator), like v1.0, v2.0.

Packages: Published snippets of code from this project that others can take and use as an ingredient. No packages mean the creator hasn't put any out.

PolyClaude

Multi-perspective council analysis for Claude Code.

PolyClaude streams parallel cognitive perspectives to analyze your questions, plans, and ideas from multiple angles — then synthesizes the results through structured statistical analysis. Instead of one response, you get a council of distinct thinkers who agree, disagree, and challenge each other.

The output isn't a list of opinions. It's a decision document: consensus points, structured responses, who spoke (boldly, quietly), a confidence meter, and a clear verdict.

93 242 3.3K 187K

HOW DID I EVEN KNOW WHAT I NEEDED? WHITEBOARD.

1. This is the exact process I tell students to use to figure out how to apply AI in their company. It's a workflow-first approach, and the best way to get AI *into* a system. Write it out, let Claude help make decisions as a co-pilot.
 2. Ask for a workflow that you'd do in an *ideal world* if there were no constraints. If I had none, of *course* I'd have someone always studying the market vetting ideas. Of *course* I'd have someone pushing and editing me.
- Take a workflow approach - not a "task on demand" approach. And ask for a no-constraints solution.

I PASTED IT IN CLAUDE AND SAID "IMAGINE NO CONSTRAINTS. HOW WOULD YOU SOLVE THIS?"

Strategy Engine - visualize (8/5/2026) Consulting evolution

Before I can summarize "what you're asking for," I need the actual sketch. Drop it however's easiest:

- **Photo of the paper sketch** — paste it into the chat
- **A file** — tell me the name and I'll read it
- **Or just voicenote/type it** — the steps in order, even messy

Once I have it, here

Hiii okay i need a workflow built. I sketched it out, it's a little insane but give me a summary of what I'm asking for. Then, we'll make it a visual HTML in the side panel here (horizontal, almost kanban style). I'll voicenote you what needs to change. Also for this one can you also include the platforms you'll need to ref underneath each step so I know where youre going? I think this will need just one skill to call the others but we shall see! let it rip.

Log feedback

...AND HERE ARE THE THINGS WE'LL NEED: ONE OPERATOR WITH A LOT OF LITTLE NOTES.

I SAID, VISUALIZE IT FOR ME. I DON'T LIKE IT BEING LINEAR TEXT I HAVE TO SCROLL ([LINK](#))

Strategy Engine - visualize (8/5/2026) Consulting evolution

One thing I can do better than placeholder 1. 2. 3. — you have an actual interview panel on disk. Let me pull it so column 02's list is real, and check your content-machine doc naming so the DOCS sections match what you actually use.

Read interview-panel-2026-09-02.md >

That's the real panel — King, Ferriss, Stern, Isenberg, Hormozi, one question at a time, saving to `drafts/<slug>-transcript.md`. And your content machine's config files are `voice.md`, `sources.md`, `lessons.md`, `formats.md`. So I can make every card a real build spec instead of dummy 1. 2. 3.

Here's the structure I'm applying to all five, matching your 02: **description** → the list of **players (where it has them)** → **DOCS (the actual .md files that drive the step)** → the blue flavor note **Claude writes** → **PLATFORMS**. No bold pile-ups, no nested boxes (the "border" in your shot was just the focus ring on the box you were editing).

Updated interview-in-code.html +134-69 >

Interview in Code

Rebuilt on the same [link](#). Every desk now follows your 02 pattern:

- 01 Find the idea(s) — two wells + scoreboard → Docs: `sources.md`, `scoring.md`
- 02 Making it mine — the real 5-person panel (King, Ferriss, Stern, Isenberg, Hormozi) → Docs: `interview-panel.md`, `voice.md`, writes `drafts/<slug>-transcript.md`
- 03 Draft → Docs: `voice.md`, reads the transcript · writes `drafts/<slug>.md`
- 04 Edit with the room — the 3 editors listed → Docs: `lessons.md`
- 05 Finalize & ship — 4 formats listed → Docs: `formats.md`

Each card is: **description** → the **players** → Docs (the `.md` files) → the blue note (labeled "Claude writes this," per your annotation) → **Platforms**. I pulled the panel and the `voice/sources/lessons/formats` file names from your actual files rather than inventing them — everything's editable in place, so fix any name that's off.

Two things to flag, not guess:

- I used `sources.md` and `scoring.md` for step 01 — those are my proposed names; your content machine has `voice/sources/lessons/formats` but I didn't see a scoring doc, so rename if you've got one.
- The `.io` faint lines (the `writes drafts/<slug>...` bits) are my read of the data flow from your panel doc. Tell me if the file plumbing is different.

Voicenote away.

Interview in Code Share

The Strategy Engine

The operator that runs your whole content desk - **Helen Mirren, editor-in-chief**. She finds the story, gets your real take under the lamp, drafts, edits, and ships it. You just talk to her.

The workflow, step by step

SKILL /STRATEGY-ENGINE - THE OPERATOR, AKA HELEN MIRREN

One operator skill runs the whole thing, moving Claude to each next step, knowing what to reach for, what context to pull, and when the work is "complete" so it can move on.

01 Assignment desk

Find the idea(s)

Mine two wells - the world's noise this week, and your own archive - then score every idea out of 100 and greenlight one.

THE TWO WELLS

External - the noise
This week's takes, trends, threads. What are people saying?

Internal - your archive
Calls, docs, recordings - things you already said out loud.

RANK · SCORE · CHOOSE ONE

1	97 / 100	GREENLIT
2	90 / 100	
3	60 / 100	
4	40 / 100	

DOCS

- sources.md
- oracle-rubric.md

PLATFORMS - EXTERNAL

Apify · X / Twitter · Reddit · TikTok · Instagram · LinkedIn · YouTube

02 The interrogation

Making it mine

The interview panel - a mix of 4-5 people, defined in a md - interrogates you one question at a time until your real take is on the table. Not a summary of the internet.

THE PANEL

- Larry King - cutting straight to it (leads)
- Tim Ferriss - going for the tape
- Howard Stern - poking the soft spot
- Greg Isenberg - going for the takeaway
- Alex Hormozi - making it undeniable

DOCS

- interviewers.md
- writes `drafts/<slug>-transcript.md` - the drafter's near-only source

CLAUDE WRITES THIS

A light in a kidnap room. *The point is to get your answer, not a good-enough one.*

WHAT'S UNDERNEATH THE HOOD? THE SAME THINGS WE ALREADY KNOW.

SKILLS - THEY ACT

```
SKILL.md

name: strategy-engine
description: Turns a week of your real activity into an on-voice post, without slop. Runs the full pipeline - mine your channels for "hot topics," interview you to pull out your real take, draft in your voice, and self-edit to a quality bar. Trigger when the creator says "run the strategy engine," "find me content ideas," "what should I post," "help me write a post," "any good hot topics today," or wants to turn something that happened into a post. On first run (no workspace yet), send them to strategy-engine-setup first.

# The Strategy Engine - engine

You are the engine of a creator-agnostic strategy engine. Your job is to take this creator's real week and turn it into a finished, on-voice post - **without slop**. The anti-slop rule is absolute and defined in Step 3.

## Before anything: load the creator's flavor

This engine is generic. Everything personal lives in the creator's **local workspace**, located via their config file. Do this first, every run:

1. Read `~/content-machine-workspace/content-machine.config.md`.
   - If it does not exist, STOP and tell them to run `~/strategy-engine-setup` first.
2. The config points you to their flavor. Load what it names:
   - **voice** - either a 'voice.md' in the workspace, or an installed voice-guide skill (follow the pointer).
   - **sources** - 'sources.md' (accounts + topics to read).
   - **lessons** - 'content-lessons.md' (every correction they've ever given).
   - **formats** - their post formats (may live in the config or a 'formats.md').
3. Never invent flavor. If a pointer is missing, ask - do not guess their voice.

## The pipeline

Run these in order. You are the orchestrator - you follow this recipe and call in the persona files as each step needs them. Stop at every gate and wait for the human.

### Step 1 - The Operator (produces: ~10-15 ranked "hot topics")
- **Read the creator's own real week - DEEPLY. This is where the best hot topics come from.** The reason a great machine surfaces a real call line - a client's exact words, in quotes - is that it reads the FULL TRANSCRIPT of the call, word for word - not the calendar title, not a summary, not metadata. Do the same: pull the last 7 days of **call transcripts** (Fireflies, Circleback), plus real Gmail/Slack threads, and READ THE ACTUAL WORDS. Every internal hot topic must carry the **verbatim moment** - the exact sentence someone said, in quotes - never a description of the call. See the **INTERNAL** section of 'sources.md' (tools + rule). Metadata-only scanning is the failure mode that makes hot topics generic; do not do it. Score each using 'operator-rubric.md'.
- Also do **internet reading**: from 'sources.md', scan the accounts + topics they follow for posts worth a **reply or quote-post**.
- Return one ranked list. **Tag every hot topic 'original' or 'engage'**. Each links back to its exact source. Park the ones they don't pick (see Vault, optional).
- **GATE**: they pick a hot topic. If none land, offer to widen the topic search.

### Step 2 - Research Assistant (optional)
- Only if they pick a topic they don't know cold. Produce a research brief saved to `drafts/slug>research-report.md`, structured like this:
  - **What's already been said (in-market)** - the existing takes.
  - **Contrarian / novel angles (where you win)** - where your view diverges.
  - **Open questions for the interview (only you can answer)** - numbered.
  - **Sources** - with links.
- They read it before the interview and can pull quotes from it into their answers.

### Step 3 - Draft
- **If the hot topic is 'engage':** draft a short, in-voice reply or quote-post. Done - hand it over for the gate. (No full interview needed.)
- **If the hot topic is 'original':** run **The Interview Panel** first ('interviewers.md') -
```

MARKDOWN - THEY GET READ

```
operatorrubric.md

# The Operator - Hot Topics: scoring rubric & output format

The Operator scans the last 7 days and ranks **hot topics**. A hot topic is just something that surfaced worth posting about - a story, a take, a "huh, noticed that." It scores each and returns two ranked tables plus a synthesis.

## Score UP
- **A story or anecdote** - something that actually happened, with specifics.
- **A strong point of view** - a real opinion, ideally one that could draw pushback.
- **Specific examples / numbers / names** - concrete beats abstract.
- **Tension or contrast** - "everyone thinks X, but..."; two credible people disagreeing.
- **Lived experience** - you were there; you know something only you know.

## Score DOWN
- Generic observations anyone could make - pure news with no personal angle - no specifics to hang a story on.

## Output format (locked - match this exactly)
Two ranked tables, scored ~1-10. **Number continuously across both tables** (internal runs 1-N, the Internet Reader continues at N+1). Columns are exactly `# | Hot topic | Score` - **no tag column** (original/engage lives in the synthesis below). Mark time-sensitive items with 🕒 **inline at the end of the topic text**, never as its own column. Keep the tables clean: one line per topic, the moment itself as the text, not a description of it.

**📁 From your sources** (internal - call transcripts, Gmail, Calendar, meeting notes, teaching decks)
| # | Hot topic | Score |
> e.g. "Rebuilt a client's competitor-tracker live on the call - their words: 'holy fuck, that's crazy' - 9.5"
> e.g. "The question every class asks in the first ten minutes - 8.4"

**🌐 From the Internet Reader** (external - the accounts, topics, and news in 'sources.md')
| # | Hot topic | Score |
> e.g. "Anthropic's ELI5 skill hits 1.9M views - literally your pedagogy 🕒 - 9.5"
> (a same-day take on something breaking outperforms an evergreen one)

Then:
- **Top picks**: a one-line synthesis naming the strongest *original* hot topics and the strongest *time-sensitive* ones, and which are 'engage' plays (react to someone's post) vs 'original'.
- **Confidentiality flag** - surface it, don't bury it. **Call/DM/personal hot topics are often the STRONGEST, so still SHOW them in the ranked table WITH their verbatim moment - just mark them 🕒 and genericize names/numbers in any eventual draft. The guardrail is only about *staging/posting*: never publish a sensitive detail without the creator clearing it first. Do NOT drop a great call topic just because it came from a client call - that's how the good stuff gets lost.
- **What do you want to do?**: numbered next-actions:
  1. Pick a hot topic to develop -> interview -> draft -> council
  2. None of these -> open Discovery Mode (widen the search)
  3. Post this digest somewhere (say the word)
- **Sources**: list the sources the Internet Reader hot topics came from.

Every hot topic links back to its exact source, and is tagged **'original' (full post) or 'engage' (reply / quote-post on someone else's post) - in the synthesis, not in the table.
```

(And this one chains them all together - this is how we prevent a "jumble of messy obsolete markdowns")

BUT WHAT IF YOU WANT A TRULY COMPLEX WORKFLOW?

YOU JUST...DO THE SAME
THING :)

**NEW MODELS ARE
TRAINED TO
ONE-SHOT.**

THIS IS MY CLIENT PIPELINE PROCESS. IT DOESN'T JUST GIVE ME INFO. IT MAKES THINGS FOR CLIENTS.

IT ONE-SHOTS BRANDED INTERACTIVE PROPOSALS, CUSTOMIZED PRE-WORK, INVOICES.

LET'S PULL OUT JUST ONE THING CLAUDE MAKES: A PROPOSAL.

IT KNOWS WHEN TO DO THIS BECAUSE WE'D HAMMERED OUT THE FLOW AND SKILL.

AI FOR NORMAL PEOPLE :)

Visual SOP: the pipeline operator

Email + call notes + the tracker + evidence rules = a reconciled CRM, advanced deals, and a plain-words to-do list - three times a day, without a single message sent.

● Grace ⓘ Claude, a skill ○ Claude, code

Scaffolding

- #1 **/pipeline-operator** - two passes: a 2-day change feed every run, a 14-day state sweep once a day; reconcile, advance, report (3x daily)
- #2 **AI Training Tracker** - the CRM it reconciles against: Clients / Pipeline / Closed tabs
- #3 **/new-client-onboarding** - fired automatically on an accepted proposal (unconditional written yes only)
- #4 **Gmail + Circleback** - the inputs: inbox, sent, and call notes
- #5 **grace-sheets-bot** - the service account that writes the sheet via gspread; the direct path, no toggling
- #6 **evidence + direction rules** - inbound-only leads, full-thread evidence before any write, delta-only on repeat runs

Claude and I revised this one for 7 rounds. That's normal.

“PROPOSAL MAKER” IS A SKILL IN THE PIPELINE OPERATOR PROCESS.

The screenshot shows the 'Customize' interface for a skill. On the left, a sidebar lists 'Skills', 'Connectors', and 'Plugins'. The main area displays the details for 'skill-proposal-maker-2026-08-19-v2'. The 'Contents' tab is active, showing a file tree with 'assets' and 'references' folders. The 'references' folder is expanded, and a red box highlights the following files: 'format-crash-course.md', 'format-hackathon.md', 'format-multiweek.md', 'format-training-day.md', and 'terms-boilerplate.md'. The main content area shows the skill's title 'Proposal Maker (GGC LLC) - four formats, one machine' and a description: 'Frontmatter guard (keep this skill installable): the description field must stay at or under 1024 characters - the installer rejects anything longer. When adding a new build's changes, put them in the changelog and body sections below, NOT in description. If description must change, count it before saving. Client names, URLs, and passwords are examples inside the body, never load-bearing - the machine reads the deal shape at runtime, so no single client's shape is hard-coded into the logic.' Below this, a section titled 'What changed in 2026-08-19-v2 (changelog - cleanup + rulings)' states: 'Grace's rulings on the 08-19 build. Folded into the body; run the Pre-flight self-check.' At the bottom, a note says: 'The top ALWAYS opens on identity/dream - individual OR'.

/SKILL.md

Proposal Maker (GGC LLC) - four formats, one machine

Frontmatter guard (keep this skill installable): the **description** field must stay at or under 1024 characters - the installer rejects anything longer. When adding a new build's changes, put them in the changelog and body sections below, NOT in **description**. If **description** must change, count it before saving. Client names, URLs, and passwords are examples inside the body, never load-bearing - the machine reads the deal shape at runtime, so no single client's shape is hard-coded into the logic.

What changed in 2026-08-19-v2 (changelog - cleanup + rulings)

Grace's rulings on the 08-19 build. Folded into the body; run the Pre-flight self-check.

The top ALWAYS opens on identity/dream - individual OR

I LOVE THIS - IT WILL GO AND FIND THE BRAND ASSETS ON ITS OWN AND SAVE THEM LOCALLY.

- **Logo hunt is popup-proof and validated across THREE sources (section 3).** A newsletter/cookie/consent popup is never the logo and never a color source: dismiss it (or read the DOM header / `:root` directly) and exclude anything inside a modal/overlay/dialog node. Confirm the mark by CORROBORATION across independent sources - header + favicon/og:image + a third (social avatar or the brand's own logo asset) - not a single "second source." A one-place graphic (a popup blob) can't corroborate, so it washes out. (STJ: the lime `#c0d260` was the site's real `:root --green` and earned the palette; a golf-club `.webp` misfiled in the folder did not, and the green popup blob did not.)
- **Open the merged top on the client's IDENTITY / dream outcome, not the business diagnosis.** First line is who they are and what they get back, not "the company runs lean, publishes X a week." (STJ opener: "A founder, a creator, a DJ - a true multi-hyphenate who needs room to make her own work again.") Hormozi: lead on the after-state.

Settings

IT REALLY WILL NOT STOP UNTIL IT FINDS IT AND SAVES IT.

Yeah. But first confirm that you can get her logo, her information, the colors. That's important.

Good call — the proposal has to be in their branding, so let me confirm I can actually get it before we build. Let me pull from their site.

Loaded tools, searched the web, read a file

That icon in your Pipeline folder (`512x512bb.webp`) is actually a golf-club logo — RGHC, green with a flag — not Spread The Jelly, so that one's misfiled. Let me confirm what I can pull for STJ from their live site.

Used Claude in Chrome (9 actions), loaded tools, searched the web · 2 notes

Failed to fetch https://images.prismic.io/spreadthejelly/Zqqbwh5LeNNTxrh_r_spread-the-jelly--og.png

- Image and text extraction won't give me exact hex codes off their site (it's a Prismic/JS build). Let me just look at it directly and sample the real palette.

That's their brand, clearly: bold playful black "Spread the Jelly" wordmark, white background, and that signature lime-green blob. Let me grab the exact hex and fonts.

Confirmed — yes, I can get all of it, and I pulled it straight from their live site. Here's what STJ's branding actually is, so the proposal will look like *them*, not a generic template:

Logo / wordmark: the black "Spread the Jelly" lockup — bouncy, hand-drawn "Jelly" with "SPREAD THE" in small caps above it. I can pull the asset or rebuild the lockup cleanly.

Colors: it's a tight, high-contrast palette — black (`#000000`) and white (`#FFFFFF`) with one signature **lime/chartreuse green** (that jelly blob, roughly `#C4DD6B`). That's the whole system, which is great for a clean proposal.

Fonts: their display font is **Syne ExtraBold** — the heavy, playful headline type. It's a free Google Font, so the proposal can literally use their real headline typeface, with a clean sans for body.

Brand voice/info: "an editorial resource & storytelling platform for every motherhood journey," with a playful house lexicon — *Getting Sticky, Get Jelly, Jelly Loves, Ask Jelly*. Warm, editorial, a little irreverent.

One flag: that `512x512bb.webp` sitting in your Pipeline folder is a **golf-club logo (RGHC)**, not STJ — looks misfiled, so I didn't use it.

The one thing I'd tighten before building: the exact green. I've got it visually (~ `#C4DD6B`), but the *true* source is STJ's Canva template, since that's their locked brand color. Want me to pull the exact hex from their Canva when we build, or is eyeballed-close fine for the proposal?

So here's where we are: branding ✓ confirmed. Next I'll reorder the plan around **fundamentals + build-your-workspace as block one** (the setup-is-the-lesson move you called), trim prework down to "connect + gather," and *then* build the HTML in their black/white/lime + Syne. Want me to lock the reordered plan here first, or go straight to HTML?

AI Team Training · Pre-Work

A short setup checklist before our workshop day

Hi there! Here's what you need to do in advance of our training.

Who should be the person owning this pre-training setup? Whoever on your team has admin permissions in Google, and who will be the admin on your Claude account.

Deadline: at least 7 calendar days before the training. I design our entire engagement based on your team's answers.

What You Need to Do

5 OF 10 DONE

- ☒ In your Google Workspace, **create a dedicated AI email** (ai@barstoolsports.com) and set it as an admin with maximum permissions:
- ☒ **Send the new AI email and login information to me**, and add my phone number for two-factor in case it's ever triggered:

Why do I need access to this?

Reason 1: I use it to build or fix anything in your workspace during our project.

Reason 2: You can't add me personally to your Claude Team plan — Anthropic only allows @barstoolsports.com addresses. This shared account is how I can work in your space.

Add member

Billing charges for new team members will be prorated based on the date they are added. [Learn more](#)

By email By invite link

Email *

name@barstoolsports.com

Upload CSV

Only emails from @barstoolsports.com may be invited
- ☐ Sign up for the Claude Team plan [here](#).
Choose standard seats. You can upgrade if the team needs more usage in the future.

Barstool Sports · AI Team Trai
+

https://barstool-sports-ai...
New Chrome available

Name	Role	Tier
Jordan Lee jordan@barstoolsports.com	User	Standard
Alex Rivera alex@barstoolsports.com	User	Standard
Sam Patel sam@barstoolsports.com	User	Standard

- ☐ Set both yourself and ai@barstoolsports.com as admins with maximum permissions.
- ☐ Set each member's spend limit so no one gets blocked mid-build.
Set it to **Unlimited**. It's a shared team pool, and I teach on Sonnet (very affordable) — it's very unlikely your team comes close. A low cap just gets people blocked mid-session, waiting on an admin to approve them.

Usage and spend limits

Manage spending for Claude usage charges

Monthly spend limit
Cap on total monthly Claude usage charges [Adjust limit](#)

Seat spend limits
Adjust the default limits for each user type

Unlimited
Per Standard user

- ☒ In Slack: **create a new channel titled #ai-training**. Invite me (graceclarke@gmail.com) as an external guest: Do not invite me to your whole Slack space:
This is where we correspond (vs email, text, etc), I'll be in it until the last day of our engagement.
- ☒ **Add all our sessions to the team calendar.**
After our initial training, we'll have 60-minute meetings once a week for the duration of our project.
- ☒ **Ensure everyone on the team completes the questionnaire.** Responses must be in at least 7 days before the training.
Add a calendar invite for the whole team to complete it, and add me (graceclarke@gmail.com) to the invite.
- ☐ To do in the future: **authorize Claude connectors that need admin permission**, like Shopify or Klaviyo.
I can tell you what to add after I review your team's questionnaire results.

My preparation in advance

1. Send the [questionnaire](#) to your team. (Done.)
2. **Customize your initial training** based on the questionnaire replies.
3. **Pre-build any custom plugins I can** at this stage.
4. Tell you which **connectors or plugins** you need to approve in Claude (ex: Shopify or Klaviyo, depending on what the team needs).

A note on timing: I build the training from whatever's in by the deadline. I don't re-tailor the session at the last minute — or add one-on-one coaching — for anyone who submits after that window.

See you soon 😊

Spread The Jelly · AI Crash Course

<https://spread-the-jelly-...>

Jelly

AI Crash Course

September 2026 with Grace Clarke

What's going on and what we'll do

A founder, a creator, a DJ - a true multi-hyphenate who needs room to make her own work again. For eighteen months you did every single thing at Spread The Jelly yourself, and your writing, your music, and the Substack you want to reinvigorate got squeezed out. These three hours hand the daily grind to Claude and teach you to drive it, so you're back to the parts only you can do.

1. Your inbox takes a hit every day - invites, giftings, submissions, and the same few reply types (editorial feature, branded feature, collaboration, teaching plug-and-repeat). Claude sorts what comes in and drafts each reply in your voice, matched to the type.
2. Cost of Motherhood pulls a thousand-plus survey and Instagram responses someone has to read and collate before a word gets written. Claude turns that into a structured summary in your language, so your editor starts at the investigative layer, not the sorting.
3. Your Canva runs on custom templates a designer built, and it wasn't connecting to Claude. We connect it and get you making on-brand graphics on demand - point Claude at the template that performed, tell it what you want, tweak the result.
4. Your pitch deck lives on pitch.com, which has no easy connector, so adding a case-study page is still manual. You'll build the custom connector yourself, with me there - connecting new tools is the admin work you'll own as the team grows.
5. Most of your day moves between Drive, Gmail, Canva, and Sheets. We set up your workspace so Claude can reach across them and act, not just chat back.
6. Outside Spread The Jelly there's your own work - social, DJ and music, the Substack. You write it; Claude takes your links and images, pulls from your shop, and hands back the pre-generated links and formatting, so you're assembling, not starting from scratch.
7. A lot happens on the go - a Louise Bourgeois series to design quotes around, a Substack idea mid-errand. Today that's Siri into a note into a Word doc; instead you work Claude from your phone, so an idea becomes something in one step.

Our plan

THE PROCESS

PHASE 1 - AUDIT & CONSULTING - ABOUT A WEEK

1. I look at how you actually work - inbox, the Cost of Motherhood survey flow, your Canva templates, the deck - and map what Claude can take on.
2. I check your connectors: what's on (Gmail, Drive, Calendar), what needs fixing (Canva, on your co-founder's login), and what needs a custom build (pitch.com, Slack).
3. I send you setup prompts to run in your own Claude first, so we walk in on real work, not setup.

Goop Kitchen · AI Team Training

<https://goop-kitchen-ai-...>

goop kitchen

AI Team Training

with Grace Clarke, for summer 2026

The Outcome

WHAT'S HAPPENING TODAY

1. Goop Kitchen is growing faster and more visibly than ever: 7 kitchens becoming ~20 by end of year. That's an opening roughly every other week. Each one runs a 100+ step launch process that is binary, repeatable, and completely manual today. Integrating AI into this ongoing process returns the team's time to strategy and creativity - which makes each launch more successful.
2. A small and mighty team is already at capacity, and each opening and additional new channel brings more complexity than the last.
3. Marketing *can* prove contribution to the business in an easier-than-ever way. Beautiful, on-brand attribution and reporting dashboards are quick to make with AI. They help the team model data-backed decisions and advocate for work we know is driving impact.
4. We've already talked through several processes AI could run better. One example: an influencer or B2B order takes ~45 minutes of re-entering the same details across six channels - marketers doing data entry instead of marketing.
5. The team's AI today is used as a chatbot, not as an agentic partner and operating system.
6. Partners, investors, and leadership understand the importance of AI. This team deserves to be positioned to not just have an answer, but to show impact already in progress.

WHAT WE'LL DO

1. Get the team onboarded on an agentic AI system - moving from chatbot habits to agents that do the work.
2. Make every team member individually proficient: each person learns to build their own skills, recurring tasks, dashboards, and artifacts, and gets coached through their first builds in the room.
3. Teach the team to turn their biggest time sinks - NRO playbooks, influencer orders, reporting - into automations they know how to build, maintain, and repeat for other processes.
4. Build skill files and workflows designed to impact the numbers the team is accountable for: launch performance, influencer and promo attribution, marketing's contribution to sales.

Deliverables

AND A FINAL TIP: THE “IDEA CATCHER” CLAUDE MOBILE APP → IDEA PLACEMENT

TLDR: ANY PROCESS CAN BECOME SOMETHING AI CAN REPEAT

1. Give your AI the outcome.
2. Let it tell *you* what it needs - skills, markdown.
3. Connect all needed data sources, custom included.
4. Revise revise revise. Then put it on a timer or a loop.
5. Make the last step saving feedback from you.

1. Brand battle: Astra GPT-6 v Fable 5.1
2. The Strategy Engine
3. **The Daily Crystal Ball** ←
4. Habits of the best operators

YOU WANT MORE TIME TO THINK, AND BETTER INFORMATION TO THINK *WITH*.

“Analyze a wide range of data that would otherwise take me hours to do manually”

“Make efficiency gains without feeling like I'm losing my analytical edge, and feel less busy rather than just able to take on more at the same level of busy-ness”

“Building my first AI agent to help automate daily, weekly and monthly workflows so I can focus my brainpower on other critical tasks.”

TLDR: You need an easy way to make decisions backed by a diverse - aka realistic - look at people behavior. Better data → faster decisions → better, more ads.

I'll show you how I solved this with a mini-app.

MEET MY CURRENT FAVORITE MINI APP - THE DAILY CRYSTAL BALL

One delightful research system that gets texted to everyone's phones each morning to inform creative, retail marketing, product dev, positioning, and CX.

10 TABS INTO 1: A DAILY RESEARCH+ROI BRIEF

What I was doing

Triple Whale,
Gorgias, ASC,
Shopify, press,
ShopMy, ChatGPT
searches on
Reddit, etc etc etc
etc.

What this cost

Impossible to read
much less find
signal. Shallow. By
the time you do
something with it,
you're behind.

Costs: teams
moving in different
directions, virality
you don't catch,
revenue you miss.

What I did instead

Made a private app
“newspaper” that
unites disparate
data you couldn't
get before, finds
patterns, short
enough to read on
the way to work.

I ASKED CLAUDE FOR SOMETHING THAT “WASN’T POSSIBLE”: BULK-SCRAPING SEPHORA REVIEWS

okay waht would be possible for scraping reviews off sephora? matt mentioend a script and a playwright browser?

Three real options, in order of how I'd try them for DedCool:

- 1. Hit the review API directly with a small script — try this first.** Sephora doesn't host its own reviews; they're served by Bazaarvoice, a third-party review platform. When a product page loads, it fetches reviews as clean JSON from a Bazaarvoice endpoint, with a public API key visible in the page's network traffic. A ~50-line Python script can call that endpoint and page through every review for a product — text, rating, date, skin-type metadata — no browser involved at all. Fast, free, and it returns structured data instead of scraped HTML. The catch: it's unofficial, so if Sephora rotates the key or changes setup, the script needs a small fix. This is almost certainly less work than what Matt described.
- 2. Playwright (Matt's suggestion) — the fallback, not the starting point.** Playwright drives a real headless browser: load the product page, click "show more reviews," scrape what renders. It works, but it's the slow, brittle version of option 1 — and Sephora runs serious bot detection (PerimeterX), so a plain Playwright script tends to get blocked once you scale past a handful of products, and then you're into stealth plugins and proxy rotation. It's the right tool when there's no underlying API to hit. Here, there is one.
- 3. Apify — the right answer for the DedCool team.** Existing Sephora/Bazaarvoice review actors on Apify handle the bot-detection and proxy mess for you, for a per-result fee. This is already in Lauren's homework (her Apify slide names actors for Amazon and Reddit). If the goal is Lauren self-serving competitor review mining without maintaining a script, Apify is the move — she pastes an actor name, Claude runs it and analyzes.

So: **for you/Matt building something, script → Bazaarvoice endpoint, with Playwright only as a fallback. For the DedCool team owning it themselves, Apify.** One scoping question that decides it: one-time pull or recurring monitor? A one-time competitive audit justifies the script; a recurring "watch our and competitors' reviews weekly" wants Apify on a scheduled task so nobody maintains code.

If you want, I can test option 1 right now — pick a Sephora product (a DedCool SKU or a competitor's), and I'll find the Bazaarvoice endpoint and pull a sample of reviews to prove the path works before you mention it to anyone.

is there evn an apify one though fro sephora reviews? if so, research it and tell me.

Type / for commands

Bypass permissions + 🔊

Table 5 High

IN 3 MINUTES, IT PULLED AND ANALYZED REVIEWS FROM 3 YEARS *WITH IDEAS*.

The interface shows a sidebar with a list of routines under the 'Dedcool' category. The main content area displays the analysis of reviews for 'Dedcool - lesson 4 plan (7/26/2026)'.

Ran 2 commands >

This corpus has a real story in it — and it corrects something I told you earlier. The headline finding first:

- 1. The 2026 crash is not the longevity complaint — it looks like a product-consistency problem.** I said yesterday's driver was "doesn't last." Wrong, and the data shows it: longevity-talk actually *fell* as ratings crashed (46% of 2024 reviews → 20% of 2026). What tripled is **"I can't smell anything at all"** (7% → 22%) and **"smells like alcohol/chemical"** (3% → 16–18%). And the damning detail is *who's* saying it: repeat buyers. "My old travel bottle from years ago smells stronger than the full bottle I just bought." "I've used 4 bottles — the last 2 smell like nothing." "New formula, can't smell it." That's not fickle first-timers; that's the loyal core reporting that recent bottles are weaker. Whether it's reformulation, a batch/QC issue, or supplier drift, it's diagnosable internally — and it's the kind of thing review data catches a quarter before sales data does.
- 2. What actually drives the love (330 five-stars, 54%):** the compliment loop is the single strongest signal in the dataset — 106 reviews mention receiving compliments, averaging **4.74★**, the highest of any theme. Layering is second (158 mentions, 4.58★ — the brand's own positioning, confirmed in customers' words), then clean/laundry/fresh identity (190 mentions) and the "skin scent, smells like *me*" framing (4.49★). Marketing copy could be assembled almost verbatim from these.
- 3. Longevity is survivable; invisibility is not.** 261 reviews mention wear time, but at a **4.17★ average** — meaning most people who bring it up bought the skin-scent premise and still love it. The fatal version is "can't smell it, period" (2.17★). The distinction matters: one is an expectations problem you manage with education, the other is a product problem you can't message your way out of.
- 4. The gaps, in the customers' own asks:** the most repeated line in the 3-star band is some version of *"if this lasted, it'd be 6/5 stars"* — which is a literal product brief for an Xtra Milk Intense/extrait flanker. And the 1-2★ vocabulary ("sample," "full size," "disappointed," "waste of money," price mentions at 2.36★) traces a specific churn loop: loved the sample → bought the \$90 bottle → new bottle underdelivers → angry review. That loop is where the money is leaking.

A word of handling advice, since this is the client's hero product: this is a **gift wrapped in a warning**, and it's exactly the demo that sells the whole review-pipeline concept — "we pointed this at your own product for an hour and found your loyal customers reporting weak bottles three months before it shows up anywhere else." I'd bring it to Meg (maybe Meg + Lauren) privately rather than the whole room, framed as "the pipeline found something you'll want ops to check," not as a slide. Honest caveats to say out loud: these are keyword counts over 612 reviews, Sephora-only (Amazon and their DTC reviews would confirm or soften it), and "reformulation" is the reviewers' theory — the truth lives in DedCool's batch records.

Grace · Max

AS I SAW THE MOCKUP, I THOUGHT OF MORE EXEC-LEVEL INFORMATION IT SHOULD HAVE.

The mockup is divided into three main sections:

- Sidebar (Left):** Contains navigation links like 'New', 'Projects', 'Artifacts', 'Scheduled', 'Dispatch', 'Customize', and a list of tasks with status indicators (e.g., 'Pipeline operator 3x daily' with '32 new' items).
- Main Content Area (Center):**
 - Header: 'Teaching / Teaching - Saie crystal ball update (9/7/2026)'
 - Section: 'Two things I can do next if you want:'
 - Make it self-refresh** — wire the daily scan (Bazaarvoice + Reddit/TikTok pull → regenerate → re-encrypt → redeploy) as a real scheduled task so "Morning Edition" actually updates itself each weekday. That's the thing that makes the masthead true.
 - File it** — right now the source lives nowhere but the deploy. I can save the HTML into your Consulting folder so you own an editable copy (no more decrypting to edit).
 - Text: 'Want either?' followed by a red-bordered box containing the suggestion: 'can you update it so includes earnings calls from big public companies reporting on their beauty portfolios? just up it in the what the ball sees and make it like market nes'.
 - Text: 'Good addition — earnings from the public beauty players gives it real market weight. Let me pull the latest quarters (Estée Lauder, e.l.f., L'Oréal, Ulta, Sephora/LVMH, Coty) and what they said about their beauty portfolios, then drop a "Market Wire" into What the ball sees.'
 - Text: 'Searched the web · 1 note >' followed by a paragraph about earnings and market context.
 - Text: 'Ran 3 commands, edited 2 files, used Netlify integration · 1 note' followed by a green checkmark and text: 'Live. The Market Wire is now on saie-crystal-ball.netlify.app — deploy 6a9ffaaa published and confirmed ready. Same URL, same dew.'
 - Text: 'It sits right in What the ball sees as a market-news strip: EL ▲+6% (makeup only +2%), L'Oréal ▲+6.5%, e.l.f. ▲+14% (+Rhode), Ulta ▲+8.9% (+Space NK) — each with a one-line Saie read. The through-line lands hard: the whole industry's growth is in fragrance and derma, not color — prestige compl ↓ n is the soft spot, which is exactly Saie's opening.'
 - Footer: '+ Write a message...' with a microphone icon.
- Right Panel (Saie crystal ball updated 2026...):**
 - Section: 'Social listening' with a description: 'What real people are saying across TikTok, Reddit, Instagram & Sephora — for Saie and the three blushes it's shelved against.'
 - Text: 'Live pull — Sep 8, 2026. Reddit (r/Sephora, r/MakeupAddiction, r/muacjdiscussion), TikTok & Instagram via Apify. Directional read from a same-day sample — sentiment leans, not a fixed panel.'
 - Section: 'The Pulse' with a description: 'positive-sentiment lean, buzz & momentum · directional, Sep 8 pull'.
 - Four data cards:
 - Saie**: 82% POSITIVE LEAN, buzz: high, dewy-blush darling, ▲ trending up.
 - Rare Beauty**: 66% POSITIVE LEAN, buzz: highest, category #1 volume, ■ holding.
 - Tower 28**: 55% POSITIVE LEAN, buzz: low, "gone in 3 hrs", ▼ cooling.
 - Merit**: 62% POSITIVE LEAN, buzz: medium, reached-for, but sheer, ■ steady.
 - Section: 'What's spiking' with a description: 'real posts from the Sep 8 pull'.
 - Text: 'TIKTOK · LIVE' and 'POSITIVE'.
 - Section: 'Saie is a genuine dewy-blush darling' with a quote: 'My favourite dewy blush product so easy for beginners... I love this formula.'
 - Text: '— 650K views · Saie's own "fresh, not painted on" clip: 18.7M plays'.
 - Text: 'Saie read: Saie punches way above its size on TikTok in the exact lane the trend is debating. That's earned equity — lean on it.'

A MINI-APP THAT GETS AHEAD OF PROD DEVELOPMENT, MARKETING, DAMAGING REVIEWS.

AND NOW - THIS APP.

(DOES NOT HURT THAT A MAJOR RETAILER REALLY LIKED IT.)

THEY HOST REGULAR “DEMO DAYS” TO MAKE AI A PRACTICE

WELCOME TO DEMO DAY!

Agentic AI training - with Grace Clarke

Start here

What is a demo day?

It's a show-and-tell of what everyone's been working on - this practice has a long and wonderful heritage in the tech world. It started at the MIT Media Lab with the old adage "demo or die" - work you show and share has the biggest impact. We'll use this tried-and-true format - you'll showcase one thing you've been working on.

What is this form, and how do you use it?

This form helps you decide what to share and script how you'll tell it. For some of you this is a first demo day, and it's a little different from the classic share-your-screen-and-talk - there's a way to tell the story, and this helps. Keep your Claude open next to you and it'll work on this with you - which is its own little demo of working with AI.

SECTION 1

About you

YOUR NAME

Your name

COMPANY

Company name

EMAIL

you@company.com

5. What will your demo look like?

Will you share a screen? Show a workflow running? I really encourage you to show something working in real time - a workflow running or kicked off, a skill being used, data being pulled from a connector. It's really, really useful to show something working, not just a finished product or an idea/setup.

6. What are the talking points for your demo?

This isn't a regular presentation. It's a short before-and-after story - something like "here's the problem I had, here's what's possible now, and here's how I did it." Lead with the problem and what changed. Don't open with the process or how it works - that comes last.

🤖 WANT HELP SCRIPTING IT? RUN THIS IN YOUR CLAUDE

I'm demoing [the thing I built with you] live to my team on demo day. Help me tell it as a story, not a feature tour. Pull from what you already know about our work together - the real before, the real build, the real change - and give me a first draft of talking points I can say out loud in my own words. Walk it through: the problem I had, what the old way cost me, what we built, what I'll show running live, and what's different now. Keep it to about two minutes. Use real examples and real numbers where we have them, and flag anything you had to guess so I can fill it in.

COPY PROMPT

↳ Or screen-grab this and drop it into Claude.

PASTE YOUR DEMO SCRIPT / TALKING POINTS HERE

[Link](#)

3. Host a “demo day.” It’s a show-and-tell of what everyone’s been doing with AI. It’s one casual meeting, not a full day, and everyone gets 3-5 minutes to screenshare. It makes integrating this stuff a group practice, not something everyone attempts alone. It’s also a time to talk about concerns, fears, feelings. If you organize one, you can use my process here.

THEY HAVE AI TELL THEM WHAT IT CAN HELP WITH + AND HAVE THE FULL TEAM PRESENT THEIR ANSWERS

The screenshot shows a web browser with two tabs. The active tab is titled "(60) How this CEO turned 25,000 hours of sales calls into a self-learning go-to-market engine | Matt Britton (Suzy)". The address bar shows the URL "lennysnewsletter.com/p/how-this-ceo-turned-25000-hours-of". The page header features the "Lenny's Newsletter" logo and a navigation bar with a search icon, a bell icon, and an "Upgrade to paid" button. The main content area displays a video player with a purple border. The video player shows a "7. Core Summary Generator" interface with a "User Message" field containing a detailed prompt. The prompt asks the AI to analyze a customer success call transcript, identify improvement areas, and generate a summary. The video player also shows a "Continue" button and a "How I AI" logo. Below the video player, there is a section titled "How this CEO turned 25,000 hours of sales calls into a self-learning go-to-market engine | Matt Britton (Suzy)" with a sub-header "Learn how a non-technical CEO built a comprehensive AI workflow that transforms customer call transcripts into actionable intelligence, marketing assets, and predictive insights". To the right of this section is a "How I AI" logo and a brief description of the podcast.

How this CEO turned 25,000 hours of sales calls into a self-learning go-to-market engine | Matt Britton (Suzy)

THEY MAKE AGENTS THAT REPORT TO EACH OTHER

D Deliberate.

Full Agent Org Chart

One agent for each department or function, trained daily on learning loops.

TOOLS USED

the stack behind the team

You

Founder & CEO · you direct and approve — one click — they carry the load

Eliza · Chief of Staff

Conductor — sends the morning brief, triages your inbox, relays Slack with memory, and keeps every agent's work moving so nothing stalls waiting on you

GROWTH & CREATIVE

Zelda · Paid media & creative

Runs paid media end to end and makes the ads — distills your data into evidence-backed angles, casts real footage from your library, then kills losers and scales winners on contribution margin.

Anni · Email & retention

Campaigns, lifecycle flows, and SMS written in your brand voice and tied to what's actually in stock — the revenue that doesn't depend on ad spend, tended every day.

Louisa · Customer insights

Your listener — synthesizes reviews, NPS, and support tickets into ranked patterns, then hands Zelda the angles that become your next winning ads.

SELLING

C.J. · Amazon

Minds your Amazon channel — listing health, reviews, and the Seller Central numbers no one surfaces — so the marketplace never drifts unwatched.

Aaron · Wholesale

Runs the wholesale side — order forms, line sheets, invoices — and keeps retail partners moving without eating your week.

Mariah · Your website

Browses your site like a customer — pages, prices, checkout — and catches what breaks before it costs you a sale.

OPERATIONS

Waldo · Operations

Watches orders, fulfillment, and inventory across every warehouse — days of cover by SKU, what's stuck, what's at risk — and flags it before customers notice.

Maggie · Finance

Keeps the books that matter daily — landed cost on every PO, margin by SKU and channel, and a P&L that doesn't wait for month-end.

Lucretia · People ops

Handles the paperwork around your team — onboarding, docs, the questions that eat afternoons — so the humans do human work.

BRAND BATTLE: FABLE 5.1 VS ASTRA

HOW DID WE DO?

THEY MAKE ANY AND ALL CUSTOM CONNECTORS THEIR TEAM NEEDS.

Open [this document](#) for the prompt to kick it off ↗. Claude will lead you through the process.

- v1 - For personal accounts ...
- v1 - FOR ADMIN - 6/22/2026
- v1 - For team plans - 6/20/2...

Skip to the [prompt below](#) if you just want to make this. Read this if you want to understand the technical elements (I would).

PART 1: WHAT IS THIS?

TLDR: an app in google with a key that you upload into Claude, Claude makes a plugin, and lets you edit Google apps.

Q: Why do I need a plugin? Can't Claude just open the browser window and do it?
A: Yes, it can open a browser window and edit a spreadsheet or a doc.

Q: What is a plugin vs a connector?
A: A connector is pre-built. It lives in Claude's connectors menu, you sign in, done.
A plugin is one you and Claude build yourselves when no connector exists. It does the same job as a connector - it lets Claude talk directly to an app instead.
Technically, It's a small piece of code that lives in your Claude folder.

Q: Where does this get built - in Claude or Google?
A: First, in Google, specifically in the developer platform. (Every Google user has one.) Then, Claude writes the code when you copy in the _____

Q: What is this considered?
A: A Google Cloud Project. It's a workspace Google gives you for building things that connect to their products. People use them to build apps, run websites, and store data on Google's servers. You would know if you've built one before.

Q: Is the Google Cloud Project the plugins?
A: No. The Cloud Project is like the folder for the plugins you're making. It's one Google Cloud Project because all four plugins are asking Google for the same kind of permission, and Google lets them share one sign-in. You set it up once and reuse it.

THEY DIAL **/BOARD** TO REACH THEIR MENTORS

Create an “advisory council” to advise and support you, especially in areas you’re not an expert. It’ll be a skill you type “/board” to run. Use this prompt.

name: skill-board-of-advisers-2026-08-07

3

description: Grace Clarke's personal Board of Advisers. Five real advisers who give her counsel on business decisions, strategy, pricing, positioning, and leverage before she commits. Use whenever Grace says "run my board", "board this", "what would my board say", "ask my advisers", "run my board of advisers on this", or brings a business decision/offer/pricing/positioning question and wants outside counsel. NOT for line-editing content (that's the Writer's Council) and NOT for interviewing her to pull ideas out (that's the Interview Panel).

4

5

6

Grace's Board of Advisers – Business Counsel

7

8

Five people who advise Grace on the *business* – the move, the offer, the price, the positioning, the leverage – before she commits to it. This is the room she walks into to pressure-test a decision and hear what each expert would tell her to her face.

9

10

What this is – and what it is NOT

11

12

- This board gives **counsel on decisions and strategy.** "Should I do this? How should I price it? What am I missing? What's the bigger move?"

/SKILL.md

Code

141

Step 1: Announce

142

...

143

Convening Grace's Board of Advisers...

144

145

Deliberating on: [one-line summary of the decision or move]

146

...

147

148

Step 2: Apply all 5 perspectives

149

Internally run each adviser's full methodology against what Grace brought. Each should produce 200-400 words of real counsel – advice, not a book report.

150

151

Step 3: Synthesize (7 steps)

152

1. **Consensus mapping** – where do 3+ advisers agree?

153

2. **Tension identification** – where do 2+ advisers genuinely disagree?

154

3. **Tension resolution** – is each tension resolvable, a trade-off, or context-dependent?

155

4. **Blind spot detection** – what did no adviser address?

156

5. **Confidence mapping** – where is the board certain versus uncertain?

157

6. **Synthesized verdict** – 1-3 sentences, bottom line, no hedging.

/SKILL.md

28

29

Methodology:

30

1. What is the actual ask here – and is it unmistakably clear?

31

2. Which persuasion principle is this leaning on, and which one is missing?

32

3. Where is the social proof? (results, numbers, names, "other people already said yes")

33

4. Is Grace's authority established or hidden? (she tends to hide it)

34

5. Is any scarcity or urgency *real*, or would it read as a gimmick?

35

6. What is the single change that makes a yes more likely – without costing trust?

36

37

Signature questions:

38

- "What exactly are you asking them to do – and is it obvious in three seconds?"

39

- "Where's the proof that other people already said yes?"

40

- "You're the authority in the room. Why are you hiding it?"

41

- "Is that urgency real, or are you manufacturing it?"

42

43

Confidence calibration: High on conversion, offer framing, and persuasion mechanics. Lower on product substance and long-term brand.
