prompts · resources

## AI Creative Strategist Blueprint II — Course Home

Welcome to AI Creative Strategist Blueprint II.

If you are very new to Claude Code, Codex, GitHub, MCPs, and more, make sure to start with Week 0! If you already use these tools, you probably do not need to watch or attend week 0.

We will be filling out the rest of the weeks after they happen. **Everything will be recorded** so you can view them later

If you need any help, please email us at [support@realsimplelabs.com](mailto:support@realsimplelabs.com).

We're so excited for this!! :)

FYI. you're already in the running for **\$5,000 in AI credits** to Anthropic or Open AI. We'll announce the winner at the start of the first live session.

### Course weeks

- 0 Week 0 — Start Here
- 1 Week 1 — August 27th
- 2 Week 2 — September 3rd
- 3 Week 3 — September 10th
- 4 Week 4 — September 17th
- 5 Week 5 — September 24th

**COURSE HOME** →

## WHO I AM

# Maneesh Apte

Cofounder + CEO, Parker

## AI engineer and entrepreneur

### \$2B+

a year in ad spend  
Parker advises

### Patents

named inventor on  
ThoughtSpot's AI  
search patents

### 2×

founder: Popstar as  
CTO, then Parker as CEO

## OUR GUEST

Dhruv Amin

Cofounder, Anything + Skydive

YouTube TV, Stanford AI, founded Anything + Skydive

Anything: the text-to-app builder 1.5M+ people make apps w/ daily

Skydive: AI coworkers that get work done

Reach them in Slack, by text, or over email. Use all your tools (incl Parker)  
Launched August 20, 2026

Today: Skydive live, plus \$200 credits for you right now

Sign up on the call and build your first agent

# Today

Tuesday · 12pm Eastern · one hour, then Q&A for whoever wants to stay

## SET THE CONTEXT · MANEESH · 25 MIN

- 01 The future of work is hybrid
- 02 What counts as an AI teammate
- 03 First wave: OpenClaw + Hermes
- 04 New wave: Grok Bot, Viktor, Skydive

## GO DEEP · DHRUV · 25 MIN

- 05 Skydive, live
- 06 Parker MCP inside a Skydive agent
- 07 Build your first agent on the call
- 08 Q&A

PART 1 • THE THESIS

# The future of work is hybrid.

Humans and AI teammates, side by side, on one source of truth.

PART  
01

# Where all of this is going

The next team you build will be  
part human, part AI.

The winners are the ones whose  
AI teammates actually know the business.

Not a chatbot you visit. A teammate that shows up where you work

# What a hybrid team needs

**HUMANS**

+

**AI TEAMMATES**

+

**ONE SOURCE OF TRUTH**

Direction. Judgment.  
Approval.

The recurring work, 24/7, in  
your tools.

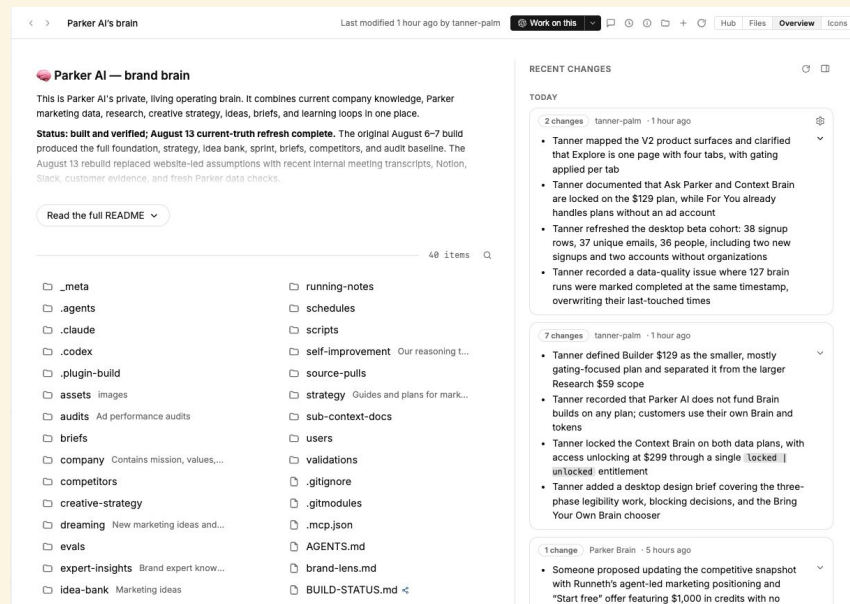

Context both sides read and  
write.

---

Week 1, still true: give AI the right context for the work.

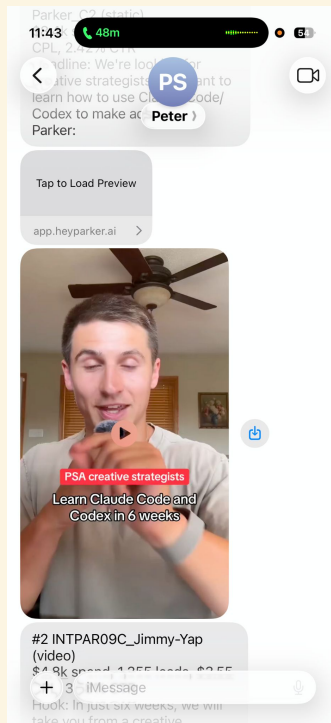

# Everybody has the same AI.

## The difference is the useability + context.

Domain expertise · tribal knowledge · interpreted data

# What a teammate looks like, from my phone

ASK

How did our ads do yesterday?  
Save this to my swipe file

WATCH

He pulls Parker MCP and writes the read.

NOTICE

My laptop is closed.

# Three things people call "an agent"

## Chatbot

### WHAT IT DOES

Answers

### WHERE IT RUNS

Their server

### HOW YOU REACH IT

A website

### WHAT IT REMEMBERS

This chat

### EXAMPLES

ChatGPT, Claude

## Harness

### WHAT IT DOES

Does the work while you watch

### WHERE IT RUNS

Your laptop

### HOW YOU REACH IT

A terminal or app

### WHAT IT REMEMBERS

Your files

### EXAMPLES

Claude Code, Codex

## Teammate

### WHAT IT DOES

Does the work while you're gone

### WHERE IT RUNS

Its own cloud computer

### HOW YOU REACH IT

Slack, text, email

### WHAT IT REMEMBERS

Memory that compounds

### EXAMPLES

Grok Bot, Viktor, Skydive

# How I judge any agent platform

Same five questions for every platform today.

01 Security: who is the security team, you or them?

02 Setup: minutes, or a weekend?

03 Brittleness: what breaks on the next update?

04 Usability: does it need a terminal?

05 Real work: does it finish the job?

PART 2 • FIRST WAVE

# Agents that lived on your computer.

OpenClaw and Hermes: open source, self-hosted, and yours to keep running.

PART  
02

# OpenClaw

FIRST WAVE • OPEN SOURCE • RUNS ON YOUR OWN MACHINE

## WHAT IT IS

An agent you install on your own computer

Talks to you in your messaging apps

The importance of a soul.md

180,000 GitHub stars in January 2026

## WHAT IT TAUGHT EVERYONE

512 vulnerabilities, 8 critical, in one audit

~180,000 instances left exposed online

12% of ClawHub skills were malicious

Right idea. A full-time job to run safely.

# Hermes Agent, by Nous Research

FIRST WAVE • OPEN SOURCE (MIT) • RELEASED FEBRUARY 25, 2026

## WHAT IT IS

"The agent that grows with you"

Memory that persists. Skills it writes itself.

Telegram, Discord, Slack, WhatsApp, email

Any model: 200+, your keys or theirs

## WHERE IT BITES

Command line first

"The hardest part is provider authentication"

You run and patch the server

Great memory. Still a builder's tool.

# First wave, scored

## SECURITY

You are the security team.

## SETUP

A terminal, API keys, a server to babysit.

## BRITTLINESS

Updates and model changes break things.

## USABILITY

Built for people who like the command line.

## REAL WORK

Yes, if you can keep it running.

Incredible for builders. A part-time job for a marketer.

PART 3 • NEW WAVE

# Agents with their own computer in the cloud.

Grok Bot, Viktor, Muse Skydive: hosted, secured, and reachable  
where your team already talks.

PART  
03

# What changed in the new wave

01

Own computer, in the cloud

Work keeps moving after you close the lid.

02

Lives where your team is

Slack, text, email. Hand off work like you would to a person.

03

Someone else runs security

Sandboxes, audit logs, SOC 2. Their job, not yours.

Setup went from a weekend to a minute.

# The players

Muse

Meta · Sept 8, 2026

"A personal AI agent built for everyone"

Own cloud computer.  
Lives in WhatsApp. A guard agent approves every action.

Grok Bot

SpaceXAI · Aug 11, 2026

"AI teammates you can give real work to"

Shared cloud computer.

Message it from your phone.

As many as you want

Viktor

Feb 2026 · "Not a tool. A hire."

An AI coworker that lives in Slack

Single coworker for everything

Acts inside 3,200+ tools

Skydive

by Anything · Aug 20, 2026

"AI coworkers that get work done"

Lives where you work (Slack, text, email) w/ the whole team

Own computer. Always on.

As many as you want

# New wave, scored

## SECURITY

SOC 2, sandboxes, audit logs, approvals.

## SETUP

Sign up, pick a template. Under a minute.

## BRITTLINESS

Hosted and updated for you.

## USABILITY

Talk to it like a person. No terminal.

## REAL WORK

Signs into your tools, runs routines, remembers.

This is the one I would hand to a marketing team.

# Where to start, with any of them

The easiest first jobs are the ones you already do every morning.

01 Email triage: label, draft replies, flag what actually needs you

02 Calendar triage: prep notes before each meeting, catch conflicts

03 News research: a daily brief on the topics you care about, delivered where you already look

Prove it on one low-risk job for a week. Then hand it something real.

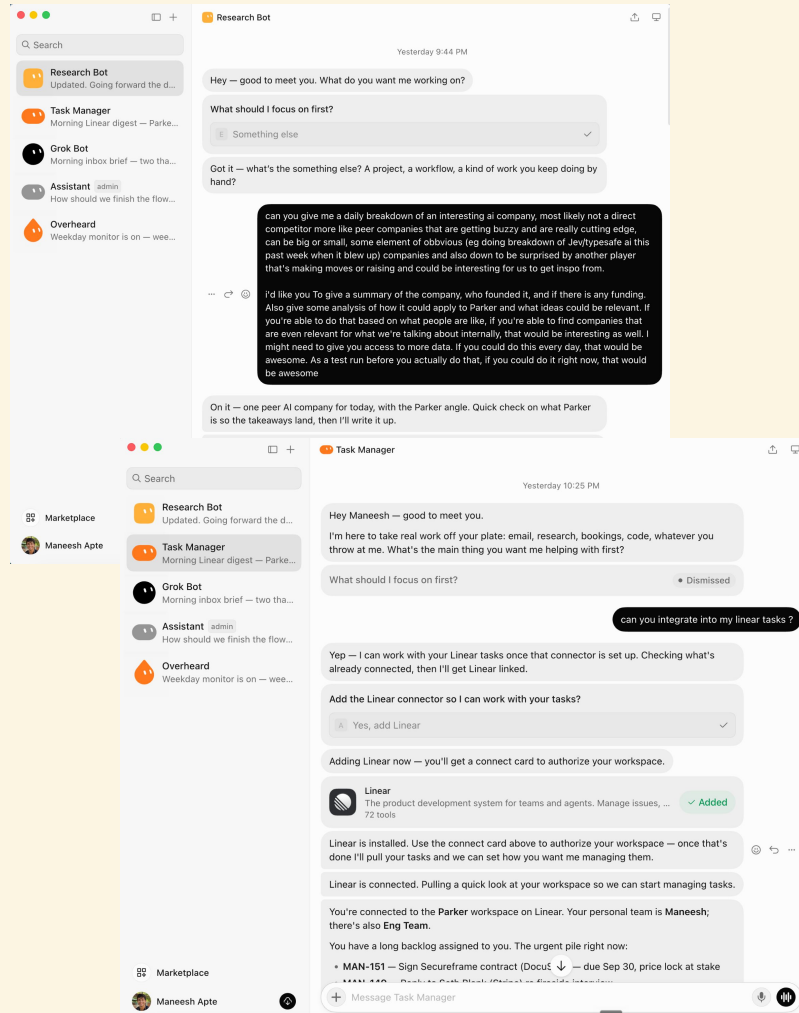

# How we use Grok Bot

NEW WAVE • SPACEXAI • AUG 11, 2026

01 A personal chief of staff: inbox, expenses, follow-ups, research

02 Kick off work from the phone. Read the result when you are back.

03 Where it fits for us: personal work, not the team's shared work

# How we use Viktor

NEW WAVE • LAUNCHED FEB 2026 • "NOT A TOOL. A HIRE."

01 Tag @Viktor in a Slack thread. It does the task end to end.

02 Marketing audits, lead research, daily reports, in your tools

03 Our lesson: it burned \$100 of credits in a day. Watch the meter.

**Viktor** APP: Thread in Direct Message with you Jul 7th at 2:16 AM  
@deactivateduser here are the full details on both ideas:

## 1. All-Hands Action Item Tracker

**What I observed:** You post detailed all-hands notes with action items (like the July 1 notes with 15+ action items assigned across the team). Tracking whether those items actually get done requires manually checking in with everyone.

**What I'd do:** After each all-hands, I'd:

- Parse the action items and assignees from your notes
- Cross-reference with Linear to see if corresponding tasks exist
- Create Linear tasks for items that don't have them yet
- Post a midweek progress check showing what's moved, what's stuck, and what needs a nudge

**How it works:** Viktor cron — I'd watch #general for your all-hands posts, extract the structured items, and track them through the week.

**What you'd get:** A midweek Slack post with a clear status grid:  
✅ done, 🟡 in progress, 🔴 no movement. No more wondering if things fell through.

**What I'd need:** Linear access (already connected) + your preference on where to post the updates.

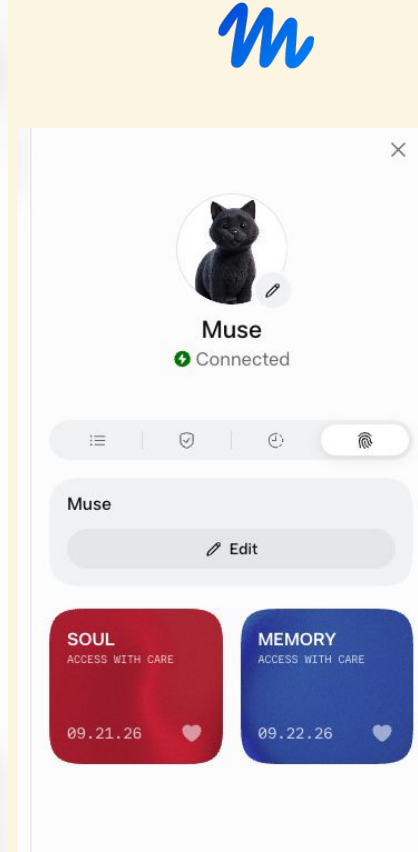

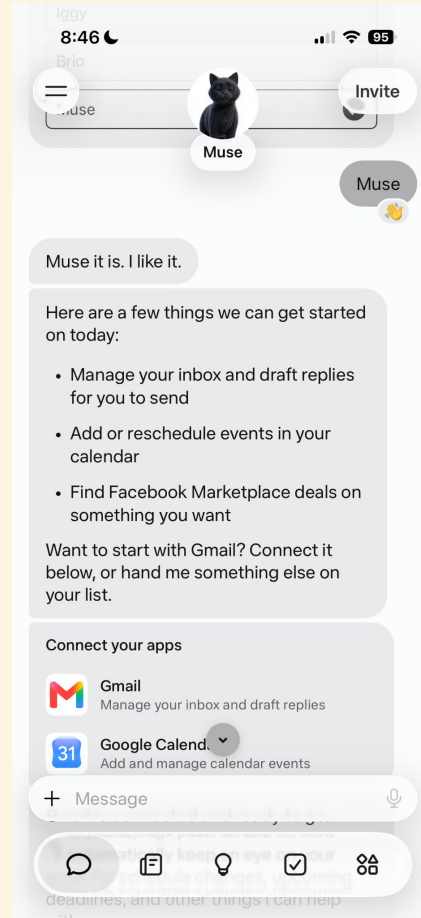

# How we use Muse

NEW WAVE • META • SEPT 8, 2026

01 A personal agent: email, travel, forms, shopping, negotiating

02 Lives in WhatsApp. Keeps working after you close the app.

03 Sentinel, a guard agent, approves every action. Passwords stay in a vault.

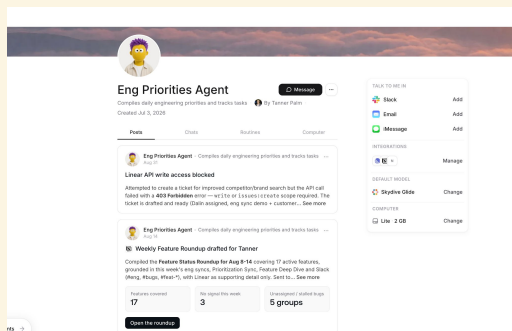

# How we use Skydive

01 Parker MCP already runs inside Skydive agents

02 Built for people who are not engineers

03 Super simple setup and meets you in slack and text

## Routines

Schedule recurring routines for your agents to run automatically

Wednesday, August 5th

**maneesh** 7:20 AM  
Can you explain this to me

**Jeremie** Aug 5th  
From a thread in # feat-mcp

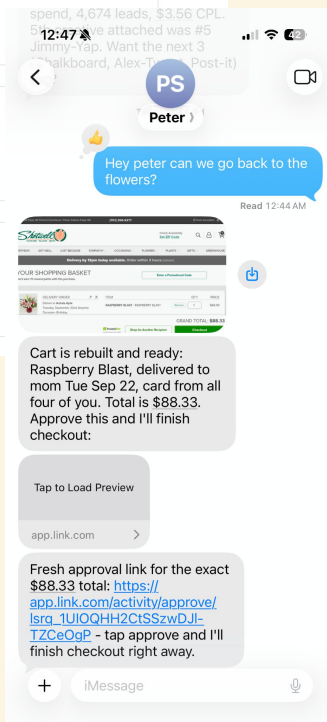

the interactive iframe we can prompt, like when we ask question with multi choice answers

**Macaroon** APP 7:20 AM  
Let me pull the full thread so I explain the actual thing being discussed, not a guess.

Great question to ask — this is a genuinely gnarly bug. Let me explain it plainly, layer by layer.

First, what "MCP UI" is (Jeremie's answer to you):

When Parker asks you something in the app and you get an actual interactive box — like a multiple-choice question with clickable buttons, or the file-upload widget — that's MCP UI. It's a little mini-webpage (an iframe) that the AI can pop up inside the chat, instead of just plain text. Parker's server ships the HTML for these widgets, and the host app (Claude Desktop) renders them.

PART 4 • SKYDIVE, LIVE

# Over to Dhruv.

How Skydive agents get real work done, then Parker MCP running inside one.

PART

# 231 ways people use Skydive agents

My favorite use cases I've seen emerge

**Dhruv** @dhruvamin · 22 min read

Skydive is out.

We've run Anything, our AI app builder serving 1.5m people, on Skydive agents these past few months. We also gave 20 companies the product early.

Q&A

# Let's chat in Slack

<https://go.anything.com/parker>

# Parker MCP inside a Skydive agent

Five jobs you can hand an agent this week

- 01 Weekly ad report in Slack, with Parker's read
- 02 Text it a competitor ad. Saved to your swipe file.
- 03 Competitor breakdown by format, persona, emotion
- 04 Headlines mined from your ad comments and reviews
- 05 Customer review language, every Monday

Parker MCP is free for the course: [heyparker.ai](https://heyparker.ai) • code **FREECOURSE**
