prompts • resources

AI Creative Strategist Blueprint II — Course Home

Welcome to AI Creative Strategist Blueprint II.

If you are very new to Claude Code, Codex, GitHub, MCPs, and more, make sure to start with Week 0! If you already use these tools, you probably do not need to watch or attend week 0.

We will be filling out the rest of the weeks after they happen. **Everything will be recorded** so you can view them later

If you need any help, please email us at support@realsimplelabs.com.

We're so excited for this!! :)

FYI. you're already in the running for **\$5,000 in AI credits** to Anthropic or Open AI. We'll announce the winner at the start of the first live session.

Course weeks

- 0 Week 0 — Start Here
- 1 Week 1 — August 27th
- 2 Week 2 — September 3rd
- 3 Week 3 — September 10th
- 4 Week 4 — September 17th
- 5 Week 5 — September 24th

Upcoming Sessions

Thursdays at 12pm Eastern · optional Q&A follows

BUILD THE FOUNDATION

TODAY · SEP 3

02

SKILLS + ROUTINES

Build repeatable ways of working.

SEP 10

03

BUILD YOUR BRAIN

Shared context + tools, skills, and more.

APPLY IT

SEP 17

04

TURN INSIGHTS INTO ADS

Research + ideation + briefing.

SEP 24

05

SHIP, MEASURE + LEARN

Creators, campaigns + feedback loops.

OCT 1

06

BUILD THE FULL SYSTEM

Creative ops, end to end.

GUEST SESSIONS

Our next 3 guest sessions!

Guest sessions happen every Tuesday at 12pm Eastern

SEP 8

Grace Clarke

AI for Normal People

SEP 15

Jacob Posel

Shared team brain + HQ

SEP 22

Maneesh Apte

Building your Hermes agent

Last week: fundamentals of Claude Code

HARNESS

CONTEXT

+

MCPs

DOES THE WORK

INFORMATION AI NEEDS

SOFTWARE + DATA

This is how AI starts executing tasks for us

TODAY

Skills + Routines

Build it once. Automate it forever.

WEEK
02

Skills

A skill is a reusable playbook that teaches AI how you want a task done.

Think of a skill like a recipe.

- Tools = utensils
- MCPs = ingredients
- **Skill.md = repeatable steps.**

Every week, you manually rebuild the same client report.

THE PROCESS

01 Understand the account

02 Duplicate last month's deck

03 Pull the Meta data in

04 Rewrite the insights

05 Make some design changes

06 Share it with the client

Executive Summary (3-5 bullets)

- **Month outcome:** Spend, Purchases/Leads, CPA, ROAS/MER (MoM % change).
- **The headline:** "The biggest growth lever this month was ____ because ____."
- **What moved:** 1 driver (e.g., fatigue, platform shift, new creative launch) with 1 proof stat.
- **What scaled:** 1-2 scaling levers (theme/format/persona) with share + efficiency vs benchmark.
- **Next month priorities:** 1 scale move + 1 diversification/new converter bet.

1) Monthly Scorecard Trend (line chart)

- **CPA + Purchases/Leads** over the last 3-6 months (or last 60-90 days weekly).
- **Why:** execs instantly see "improving or not."

Now, just run the skill with one command.

Build the weekly Meta ads performance report for a client as one self-contained visual page, showing last week's spend, results, cost per result, and attention numbers against the week before and the brand's own KPI, with charts, the top ads with their media, plain-language notes, and next steps. Use when someone says build the weekly client report, make the weekly Meta report, what do I send the client this week, or wants last week's ad performance as a visual page they can share. Does not diagnose one ad, decide budget or pause moves, or write the Monday internal snapshot; those go to ad-account-analysis, review-performance, and the weekly-performance-snapshot prompt....

How to navigate and create a skill

First: open Claude Code and select customize.

Your skills live under the Skills tab.

Click Add. You can upload, create, or create with Claude.

Create it yourself: name, description + instructions.

Create a skill

×

Skill name

Description

Generate weekly status reports from recent work. Use when asked for updates or progress summaries.

+ Add file

1 Summarize my recent work in three sections: wins, blockers, and next steps. Keep the tone professional but not stiff...

Draft

Cancel Create

Or tell Claude Code: “Let’s create a skill.”

What makes up a simple skill?

- **SKILL.md**:
 - **name** = title of skill
 - **description** = 2-3 sentence overview of what it does
 - **instructions** = how to execute the task

And that is called the SKILL.md.

Inside SKILL.md: name + description.

Frontmatter reference

Beyond the markdown content, you can configure skill behavior using YAML frontmatter fields between `---` markers at the top of your `SKILL.md` file:

```
---  
name: my-skill  
description: What this skill does  
disable-model-invocation: true  
allowed-tools: Read Grep  
---
```

Your skill instructions here...

These two lines tell the agent when to use the skill.

Instructions lists how to do the task

Frontmatter reference

Beyond the markdown content, you can configure skill behavior using YAML frontmatter fields between `---` markers at the top of your `SKILL.md` file:

```
---  
name: my-skill  
description: What this skill does  
disable-model-invocation: true  
allowed-tools: Read Grep  
---
```

Your skill instructions here...

Write the repeatable steps you want Claude to follow.

Example of a simple skill

What happens when there are multiple ways of doing a task?

Simple vs Complex skills: when to use them

SIMPLE SKILL

One consistent way

A repeatable SOP

Example: monthly performance report

COMPLEX SKILL

Many valid ways

Requires judgment

Example: ad script writing

Simple follows the recipe. Complex chooses the recipe.

Simple vs Complex skills: what goes inside

SIMPLE SKILL

SKILL.md

Title

Description

Instructions

COMPLEX SKILL

SKILL.md + 2 additions

Title · Description · Instructions

processes/ — all the ways the task can be done

strategy.md — when to use each process and how to choose the best one

Example of a complex skill

How to create skills

Five steps to build your first simple skill

Use this checklist as we build it together.

1

Pick one job

A task you already do the same way each time

2

List the steps

In the order you actually follow them

3

Define what it can use

Inputs · knowledge docs · tools · MCPs · data

4

Specify the output

What the finished result should look like

5

Test and refine

Run it for real and improve the instructions

Six steps to build a complex skill.

It chooses the right path before it executes.

Let's build a skill together.
